                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents part of the minor histocompatibility antigen HA-1 R-allele. The specification describes methods for typing alleles (preferably the H and R alleles) of the minor histocompatibility antigen HA-1 in a sample, which comprise detecting polymorphic nucleotides in the cDNA or genomic nucleic acids of the alleles. The methods can be used for HA-1 typing for bone marrow transplants, severe aplastic anaemia, leukaemia and immune deficiency diseases, as well as detection of genetic aberrances. The probes and primers of the invention can be used to screen for the HA-1 alleles. The HA-1 peptides can be used anti-idiotypic B cells and/or T cells and antibodies.
                                                                                                                                                                                                   (UYLE-) RIJKSUNIV LEIDEN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               alleles (preferably the H and R alleles) of the minor histocompatibility antigen HA-1 in a sample, which comprise detecting polymorphic nucleotides in the cDNA or genomic nucleic acids of the alleles. The methods can be used for HA-1 typing for bone marrow transplants, severe aplastic anaemia, leukaemia and immune deficiency diseases, as well as detection of genetic aberrances. The probes and primers of the invention can be used to screen for the HA-1 alleles. The HA-1 peptides can be used anti-idiotypic B cells and/or T cells and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        T-cell epitope from the minor histocompatibility antigen HA-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAW97572;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
                                                                                                                                                      The present sequence represents a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the

                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                     and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the treatment of severe aplastic anaemia, leukaemia, and immune deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 3; Page 32; 47pp; English.

The peptide is immunogenic and can be used as part of a vaccine. PI is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the treatment of severe aplastic anaemia, leukaemia, and immune deficiency

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. Plis used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the treatment of severe aplastic anaemia, leukaemia, and immune deficiency diseases. The present sequence represents a KIAA0223 sequence given in the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  04-FEB-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               W09905174-A1
                                                                                                                               The present invention describes a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antiqen HA·1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the
                                                                                                                                                                                                                                                                  A new minor histocompatibility antigen, HA-1 - useful to treat immune diseases and prevent rejection and host versus graft disease in bone marrow and organ transplantation \,
                                                                                                                                                                                                                                                                                                                                                                           Engelhard VH,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW97414;
                                                                                                                                                                                                                                                                                                                                    The present sequence represents the KIAA0223 polymorphism in HA-1 negative homozygous individuals. The specification describes an immunogenic peptide constituting a T-cell epitope, obtainable from the minor histocompatibility antigen HA-1. The peptide can be used in vaccines or pharmaceutical formulations as medicines to induce tolerance for transplants so as to prevent rejection and/or craft-versus-Host Disease, or to treat autoimmune diseases. Neoplastic graft-versus-Host Disease, or to treat autoimmune diseases.

The specification describes an immunogenic peptide constituting a T-cell epitope, obtainable from the minor histocompatibility antigen HA-1. The peptide can be used in vaccines or pharmaceutical formulations as medicines to induce tolerance for transplants so as to prevent rejection and/or Graft-versus-Host Disease, or to treat autoimmune diseases. Neoplastic

The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see ANY34584-Y35879) can be used in nucleotides sequences can also be used as immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAX34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Page 896; Disclosure; 1912pp; English.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptides. The proteins and their associated DNA sequences are use
the treatment, prevention and diagnosis of medical conditions caused
P. acnes. The disorders include SAPHO syndrome (synovitis, acne,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
                                                                                                                                                                                                                                                  myocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched DNA probe assay or blotting techniques for determining Chlamydia pneumoniae gene expression. The present sequence represents a specifically claimed Chlamydia pneumoniae protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as atherosclerosis, coronary artery disease, carotid artery stenosis, atherosclerosis, coronary artery disease, carotid artery stenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel Chlamydia pneumoniae protein useful in the manufacture of a medicament for treatment or prevention of infection due to Chlamydia, preferably Chlamydia pneumoniae, and for diagnostic purposes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;

Recombinant DNA compound encoding oleandolide polyketide synthase for synthesizing polyketides comprising a coding sequence for a domain of a loading module or any one of extender modules

Disclosure; Page 27-28; 86pp; English.

module 1 KS domain is inactivated by deletion or other mutation. In particular, the inactivation is mediated by a change in the KS domain that renders it incapable of binding substrate (the KSI-o mutation), rendered by mutation in the codon for the active site cysteine. The oleandolide PKS is useful for synthesizing polyketides, which are useful as antibiotics and motilides. Heterologous expression of oleandolide PKS in host cells such as Streptomyces coelicolor and S. lividans is also made possible. Unmodified oleandolide compounds can be provided to coding sequence for a domain of loading module or any one of extender modules 1-4 or 1-6, including an oleandolide PKS operably linked to a promoter. Also discussed are recombinant oleandolide PKS in which the contains an inactivated KS, called KS-0, where Q is the abbreviation for glutamine, present instead of the active site cysteine required for activity. The large multifunctional PKS enzymes catalyze the biosynthesis of polyketide macrolactones through multistep pathways involving decarboxylative condensations between acylthioseters followed by cycles the first ORF also encodes the loading module. Each module is composed of at least a ketosynthase (KS), acyl-transferase (AT) and an acyl carrier protein (ACP) domain. The oleandolide PKS loading module contains an inactivated KS, called KS-Q, where Q is the abbreviation for The oleandolide polyketide synthase (PKS), also known as 8.8a-deoxyoleandolide synthase, is encoded by three open reading frames (ORF), designated oleAI, oleAII and oleAIII. The PKS is a type I "modular" enzyme, where each ORF encodes 2 extender modules and glycosylation to yield oleandomycin, glycosylation to yield oleandomycin, an antibacterial polyketide. The invention concerns an isolated recombinant DNA compound, comprising a varying beta-carbon processing activities. The macrolide product of PKS, 8,8a-deoxyoleandolide, is further modified by epoxidation and ycosylation to yield oleandomycin, an antibacterial polyketide. The of Saccharopolyspora erythraea and converted to the

                                                                                                                                                                                                                                                                                                     The present invention relates to the genome sequence of Listeria CC monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. CC monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein cencoded by the genome sequence of the present invention. Proteins cantibodies, identification of L. monocytogenes and related organisms, and cfor biosynthesis and biodegradation, especially biosynthesis of Vitamin CC selecting compounds that regulate gene expression and cell replication CC selecting compounds that regulate gene expression and cell replication CC and modulate L. monocytogenes related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and compounds that regulate gene expression and cell replication can decines compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                    The invention relates to a peptide (I) encoded by an operon (II) of Neisseria meningitidis including virulence genes, or a related molecule having a 40% sequence similarity at the peptide or nucleotide level in a Gram-negative bacterium, or its functional fragment, for therapeutic or diagnostic use. (I) and (II) are useful in the manufacture of a medicament for treating or preventing a condition (e.g., meningitis) associated with infection by Neisseria or Gram-negative bacteria. The product is useful for veterinary treatment and in a screening assay for the identification of an antimicrobial drug. The vaccines have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAU72987 standard; Protein; 289 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New peptide encoded by operon including virulence genes of Neisseria meningitidis, useful as vaccine component for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       08-MAY-2001; 2001WO-GB02003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Neisseria meningitidis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diagnostic use. (I) and (II) are useful in the manufacture of a medicament for treating or preventing a condition (e.g., meningitis) associated with infection by Neisseria or Gram-negative bacteria. The product is useful for veterinary treatment and in a screening assay for the identification of an antimicrobial drug. The vaccines have prophylactic applications. AAU72911-AAU73014 represent N. meningitidis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a peptide (I) encoded by an operon (II) of Neisseria meningitidis including virulence genes, or a related molecule having a 40% sequence similarity at the peptide or nucleotide level in a Gram-negative bacterium, or its functional fragment, for therapeutic or

The present invention relates to the isolation of novel human connective tissue related polypeptides and the polynucleotide (cDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. AAU86435-AAU86923 represent the novel human connective tissue related polypeptides.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon CC cancer-associated nucleic acid molecules (N) and proteins (P), where CC the proteins are collectively known as colon cancer antigens. The colon CC cancer antigens have cytostatic activity and can be used in gene CC diagnosis and treatment of diseases associated with inappropriate P CC expression. For example, N and P may be used in the prevention, CC associated with decreased expression by rectifying mutations or deletions CC in a patient's genome that affect the activity of P by expressing CC inactive proteins or to supplement the patients own production of P. CC distributions of the nucleic acids into a host cell and culturing the cell CC to express the proteins. N and P can be used in the prevention, diagnosis CC and AAB377789 represent sequences used in the examplification of the

                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial
                                                                                                                                                                                                                                                                                                                                  uses, since the proteins are stable at very high temperatures, some uses centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143,

CC starter unit; polyketides being synthesised from two-carbon building CC blocks, the beta-carbon of which always carries a keto group. Each round CC blocks, the beta-carbon of which always carries a keto group. Each round CC of two-carbon addition is carried out by a complex of enzymes known as CC the polyketide synthase in a manner similar to fatty acid biosynthesis. CC the polyketide synthase in a manner similar to fatty acid biosynthesis. CC carbon A (AAY58573) and EPOS P (AAY58574) are involved in formation of CC the thiazole ring formation of epothilones, and EPOS B, EPOS C, EPOS D CC and EPOS E (AAY58575-Y58578) are involved in polyketide backbone CC depothilones orf 3 (AAY58579) is an epothilone macrolactone oxidase, and CC compositions orf 3 (AAY58582) and Orf14 (AAY38593) are thought to be compositions. Epothilones exhibit a much lower drop in potency against a compositions. Epothilones exhibit a much lower drop in potency against a compositions. Epothilones exhibit a much lower drop in potency against a composition of epothilones are too compared with taxol, and are untility drug-resistant cell line compared with taxol, and are considerably less efficiently exported from such cells by the multidrug considerably less efficiently exported from such cells by the multidrug considerably less efficiently exported from such cells by the multidrug synthesis, and Sorangium cellulosum is difficult to ferment, produce on a geothilones are too complex for industrial scale chemical synthesis, and Sorangium cellulosum is difficult to ferment, producing consider for the recombinant production of epothilones in a heterologous host

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence represents a polypeptide homologous to a human secreted protein of the invention. Secreted proteins and their related nucleic acids can be used in the diagnosts of or susceptibility to a pathological condition by determining the presence or absence of a mutation in a nucleic acid or the presence or amount of expression of a secreted protein. The sequences are used to prevent, treat or ameliorate a medical protein in e.g. humans, mice, rabbits, goats, horses, cats, dogs, condition in e.g. humans, mice, rabbits, goats, horses can also be used in chickens or sheep. The antibodies to the polypeptides can also be used in alleviating symptoms associated with disorders and in diagnostic immunoassays e.g. radicimmunoassays or enzyme linked immunosorbent arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver caracteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Forty one nucleic acid molecules encoding human secreted proteins, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where cancer antigens are collectively known as colon cancer antigens. The colon therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing
                                                                                                                                                                                                                                                                                                                                                         present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                        inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and AAB37789 represent sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a peptide comprising an amino acid sequence selected from 44 fully defined amino acid sequences (ABB969549)6-ABB969549) and a polypeptide comprising an amino acid sequence selected from the 9 fully defined amino acid sequences (ABB97147-ABB97151). The above comprise a tumour antigen inducing or activating HLA-A2-restricted tumour-specific cytotoxic T cells, which recognise HLA-A2 and a tumour antigen peptide and is thus activated. The peptides and polypeptides have cytostatic activity. The tumour antigen is useful in diagnosis of and screening drugs for specific treatment of pancreatic cancer, colon and screening drugs for specific treatment of pancreatic cancer. The present cancer and stomach cancer including in the form of vaccines. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tumor antigens inducing and/or activating HLA-A2-restricted tumor-specific cytotoxic T cells, useful in diagnosis of and screening drugs e.g. cancer vaccines for specific treatment of pancreatic cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence is that of a tumour antigen protein, useful to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ABG21583;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABG21583 standard; Protein; 222

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18-FEB-2002 (first entry)
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess because the contract of the

                                                                                                           The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB5300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent wo200177334 (published 18-0CT-2001) which is available in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FR2807446-A1

                                                                                                                                                                                                                                                                                            RESULT 35
                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a protein (ABP25413-ABP30895) from group B CC streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (31), given in CC the specification. The proteins have antibacterial and antiinflammatory CC activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and CC antibodies that bind (I) are used in the manufacture of medicaments for CC the treatment or prevention of infection or disease caused by CC streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. CC Nucleic acids encoding (I) are used to detect Streptococcus in a CC (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to determine whether a compound binds to CC (I). A composition or diagnostic composition. The disease caused by CC streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be conformatography, immunoassays, and distinguishing/identifying treptococcus proteins.
                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary CC to the 502 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprises as the comprise which comprises a 5'-end complementary to the CC opinucleotide which comprises as 3'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC the full-length cDNAs. The primers are also useful for the CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB13633 to AAH18742 represent human cDNA sequences; AAB92446 to CC AAB95893 represent human amino acid sequences; AAB92446 to AAH3629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

Drosophila melanogaster polypeptide SEQ ID NO 30693
                                   26-MAR-2002
                                                                           ABB67967 standard; Protein; 468 AA
                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventifuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLO1840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLOBA) ABLI6175) and the encoded proteins

The inventue useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176 ABLIG176 ABLIG171), expressed DNA sequences (ABLIG1840-ABLIG175) and the encoded proteins (ABB57737-ABB72072).

CC describes a method for producing (1) antisense RNA that is complementary to DNA as above, which can reduce or inhibit synthesis of the protein CC coding DNA; (2) a ribozyme, which is complementary to DNA as above, which can reduce or inhibit synthesis of the protein CC specifically binds to and cleaves transcribed DNA, which reduces or CC inhibits synthesis of the protein coding DNA; (3) an expression vector, CC containing DNA as above, or which encodes antisense RNA or a ribozyme; CC encoded by DNA as above; (6) a method to produce the protein of (5); (8) a diagnostic method to produce the protein of (5); (8) a diagnostic method to detect disturbed expression of the CC contain; (7) an antibody targeted against the protein of (5); (8) a diagnostic method to detect disturbed expression of the CC contact, and comparing the expression of the protein by contacting a protein; (9) a diagnostic kit to perform the method of (8); (10) a conhaman transgenic animal, where the naturally occurring T gene has an CC altered gene structure or sequence; and (11) a method to produce a CC protein (TP) which is involved in development of the central nervous system. Antisense sequences, ribozymes and antibodies are useful for CC depression and mental retardation. This sequence represents a fragment of CC the human T protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel DNA sequence, which encodes a protein that is involved in development of the central nervous system (CNS) and has tissue and development-specific expression. The products of the

                                                                                                           RESULT 48
                                                                                                                                                                                                                                                                                                                           cc skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc cardiovascular disorders, angiogenic disorders, kidney disorders, cc gastrointestinal disorders, pregnancy related disorders, endocrine cd disorders, and infections. The proteins can also be used to aid wound company and epithelial cell proliferation, to prevent skin aging due to coulture of primary tissues, to regenerate tissues, to identify their cc cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Cc antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked cc in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked cc secreted protein of the invention.
                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                      Query Match

The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence's rend sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer an oligonucleotide comprises one of the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EP1074617-A2
                                                                                                                                                                                                                                                                                                                                                                                               AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAB03166 to AAB13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2001-318749/34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-JUL-2000; 2000EP-0116126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 8; SEQ ID 18695; 2537pp + CD ROM; English

cc has tissue and development of the products system (LNS) and cc has tissue and development-specific expression. The products of the cc invention have nootropic, neuroleptic and antidepressant activity and can be used for gene therapy and antisense inhibition. The method also cd describes a method for producing (1) antisense RNA that is complementary to DNA as above, which can reduce or inhibit synthesis of the protein cc specifically binds to and cleaves transcribed DNA, which reduces or cc inhibits synthesis of the protein coding DNA; (2) a ribozyme, which is complementary to DNA as above, which encodes antisense RNA or a ribozyme; (4) a host cell transformed with a vector as in (3); (5) a protein, cc encoded by DNA as above; (6) a method to produce the protein from the cell or the culture medium; (7) an antibody stargeted against the protein of (5); (8) a diagnostic method to detect disturbed expression of the protein of (5); (8) a diagnostic where the naturally occurring T gene has an cc altered gene structure or sequence; and (11) a method of (8); (10) a conhuman animal as in (10). The DNA, derived from the T gene encodes a T protein (TP) which is involved in development of the central nervous cystem. Antisense sequences, ribozymes and antibodies are useful for cc depression and mental retardation. This sequence represents a fraoment of cc depression and mental retardation. This sequence represents a fraoment of cc depression and mental retardation. This sequence represents a fraoment of comparing the calculating schizophrenia, autism, manic comparing the calculating schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         T gene; murine; central nervous system development; CNS; nootropic; neuroleptic; antidepressant; gene therapy; antisense; treatment; schizophrenia; autism; manic depression; mental retardation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA encoding a protein involved in development of the central nervous system (CNS), antisense sequences, ribozymes and antibodies, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DE19908423-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel DNA sequence, which encodes a that is involved in development of the central nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 2; Fig 12; 86pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    treatment of, e.g. schizophrenia and manic depression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    26-FEB-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-FEB-1999;
